Freeway Operations and Maintenance

FAST provides ITS operation and maintenance services to the Nevada Department of Transportation (NDOT).

This formalized relationship became effective in June 2004.

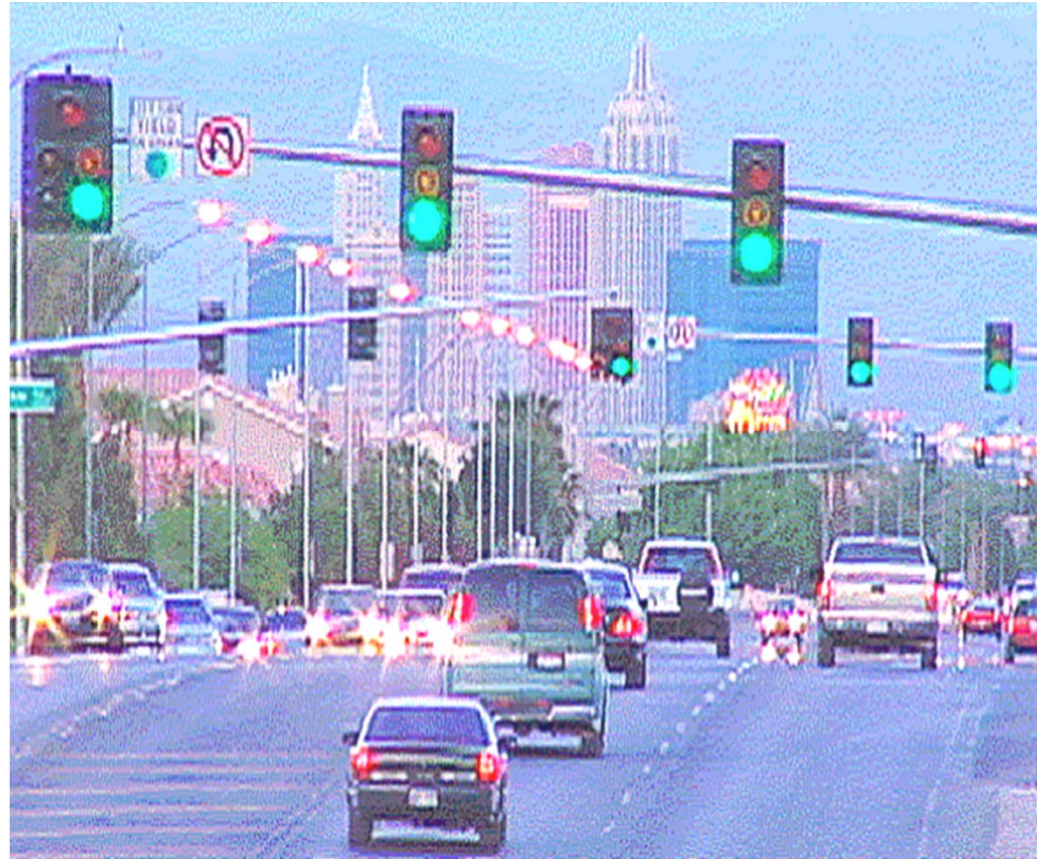

FAST works alongside Nevada Highway Patrol and NDOT in the traffic management center.

Regional Signal Coordination and Communication

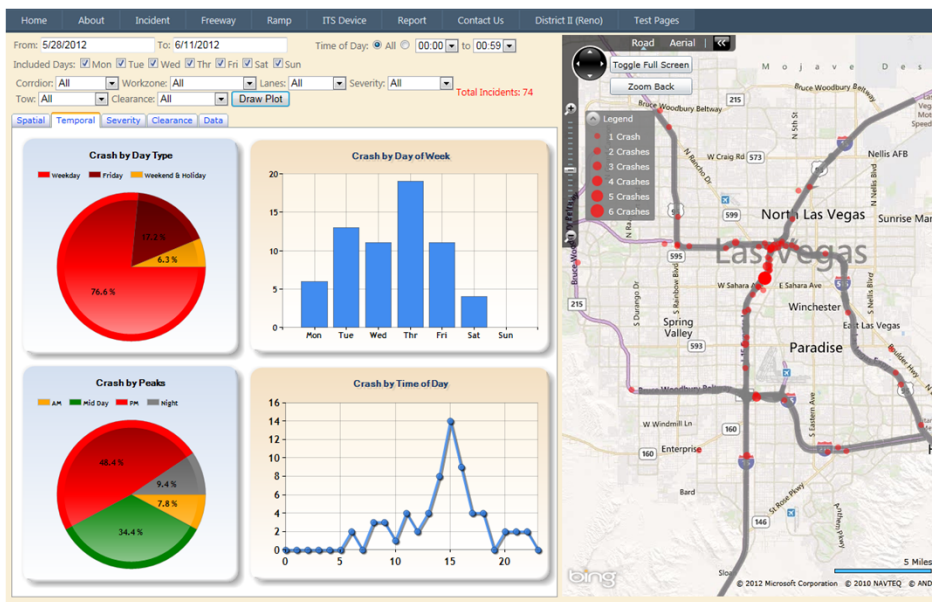

Regional signal work has been in place since the 1980s (known as LVACTS until 2004, when we became FAST).

FAST is responsible for signal coordination (so not all the work related to traffic signals) and the communication network between the field equipment and the traffic management center.

Example: Traffic Incident Management

Regional approach to operations and performance measurement efforts have contributed to very successful TIM activities in Southern Nevada

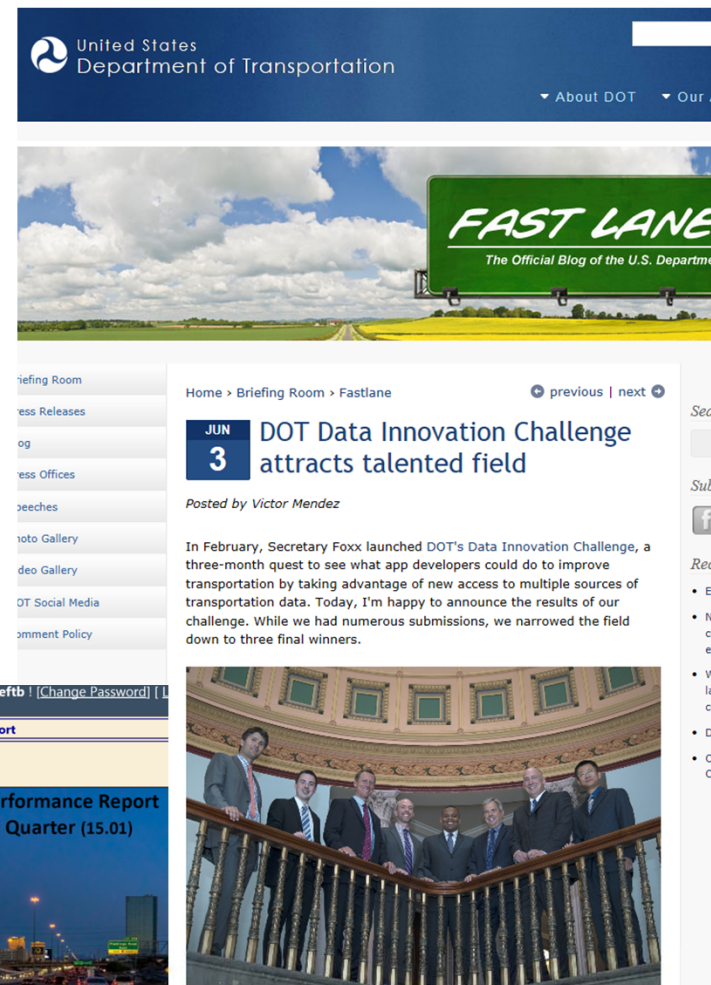

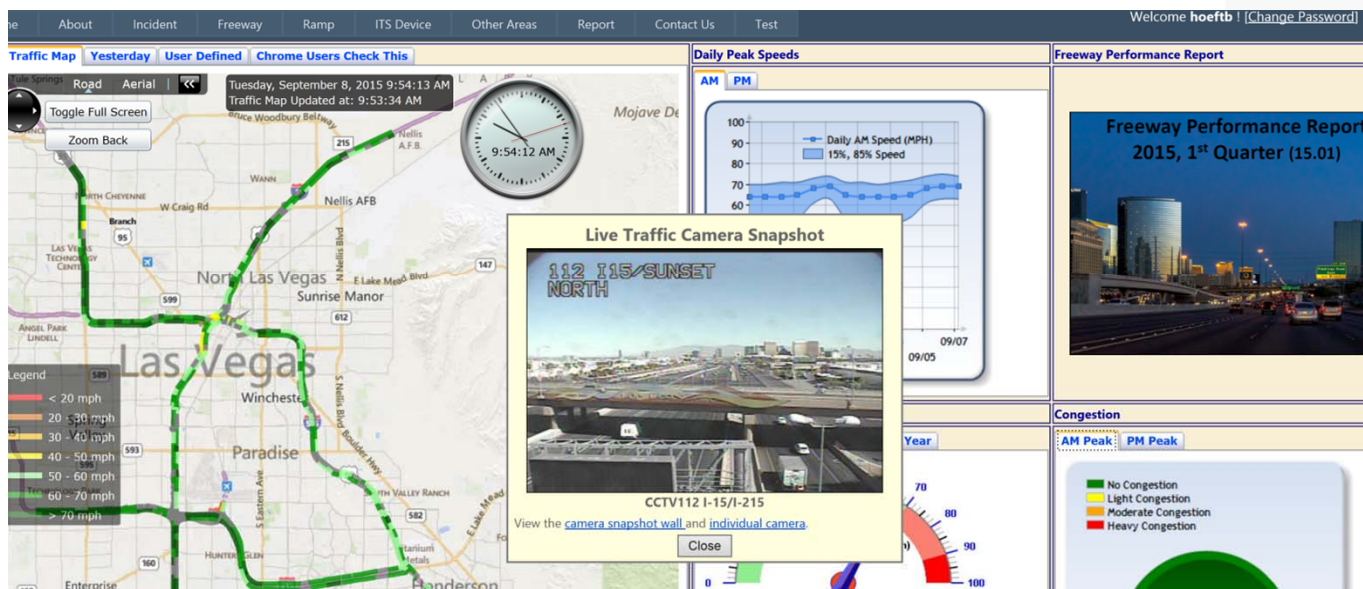

Performance Measurement

FAST staff have developed and operation & maintain a performance measurement dashboard.

Use of the dashboard provided timely and in-depth analysis of freeway performance.

An arterial component is currently under development.
