Simulation in TSMO

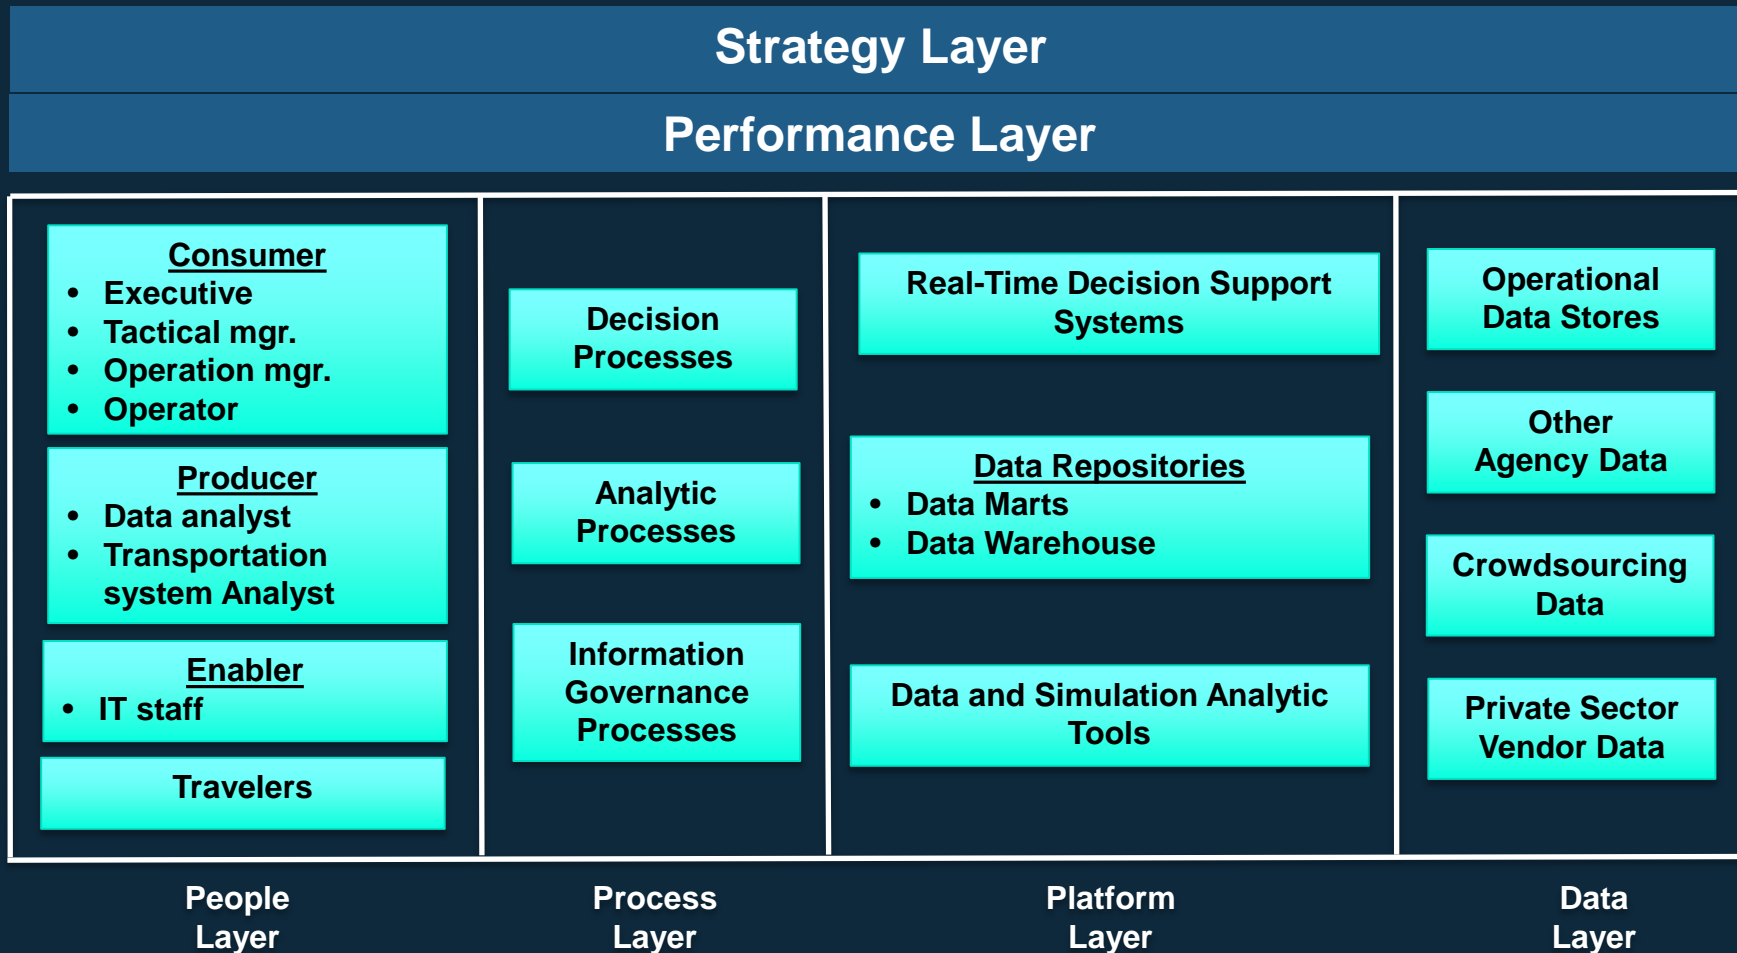

I

Background and Purpose

- ◇ Simulation can be used as an important element to support TSMO.
- ◇ Combining data analytics and simulation as part of an integrated management support system (IMSS) will improve agency decisions
 - ◇ Strategic decisions: setting direction and understanding.
 - ◇ Tactical decisions: identifying priority services, activities, and projects.
 - ◇ Operational decisions : developing response plans and deciding when the plans should be activated

Framework for Integrated Management Support System (IMSS)

III

Analysis Processes: Advanced Analytics Category

- ◇ Descriptive analytics: describe current conditions by identifying patterns, trends, and relationships in the data
- ◇ Diagnostic analytics: Identify cause and effect relationships
- ◇ Predictive analytics: predict future based on past event.
- ◇ Prescriptive analytics: assess “what-if” scenarios.

IV

Overview of Analysis Tools

- ◇ Descriptive statistics.
- ◇ Visualization.
- ◇ Statistical regression.
- ◇ Associations and correlation rules.
- ◇ Decision trees and tree ensembles.
- ◇ Bayesian classifiers.
- ◇ Support vector machine (SVM).
- ◇ Artificial neural networks (ANN).
- ◇ K-nearest neighbor (KNN).
- ◇ Clustering.
- ◇ Analysis, modeling, and simulation.
- ◇ Return-on-investment.
- ◇ Multi-criteria decision analysis.
- ◇ Expert rules and fuzzy logic.
- ◇ Post-deployment evaluation.

Simulation Uses in TSMO

- ◇ Pre-deployment and post-deployment evaluation
- ◇ Off-line design and update of response plans and activation rules
- ◇ Determining the causes of congestion and safety issues
- ◇ Training traffic management center personnel
- ◇ Predicting the performance in real-time operations
- ◇ Supporting the design and assessment of CAV applications
- ◇ Providing data on parts of the network that do not have sensors
- ◇ Generate data to train machine learning algorithms

A decorative graphic in the top-left corner consisting of several hexagons in shades of blue and teal. One hexagon is highlighted with a white border and contains the Roman numeral 'VI' in white.

VI

Specific Considerations for TSMO Simulation

- ◇ Multi-resolution analysis (Macro, meso, and micro)
- ◇ Multi-scenario analysis (recurrent congestion levels, incidents, weather) – Clustering analysis
- ◇ Calibration of strategic, tactical, and operational model parameters
- ◇ For traditional, connected, automated, and cooperative vehicles
- ◇ Replicating TSMO and CAV applications
- ◇ Data analytics and model integration
- ◇ Tool selection and extension

VII

Replicating TSMO and CAV

- ◇ Software-in-the-loop
- ◇ Co-simulation
- ◇ Hardware-in-the-loop
- ◇ Vehicle-in-the-loop
- ◇ Human-in-the-loop

2

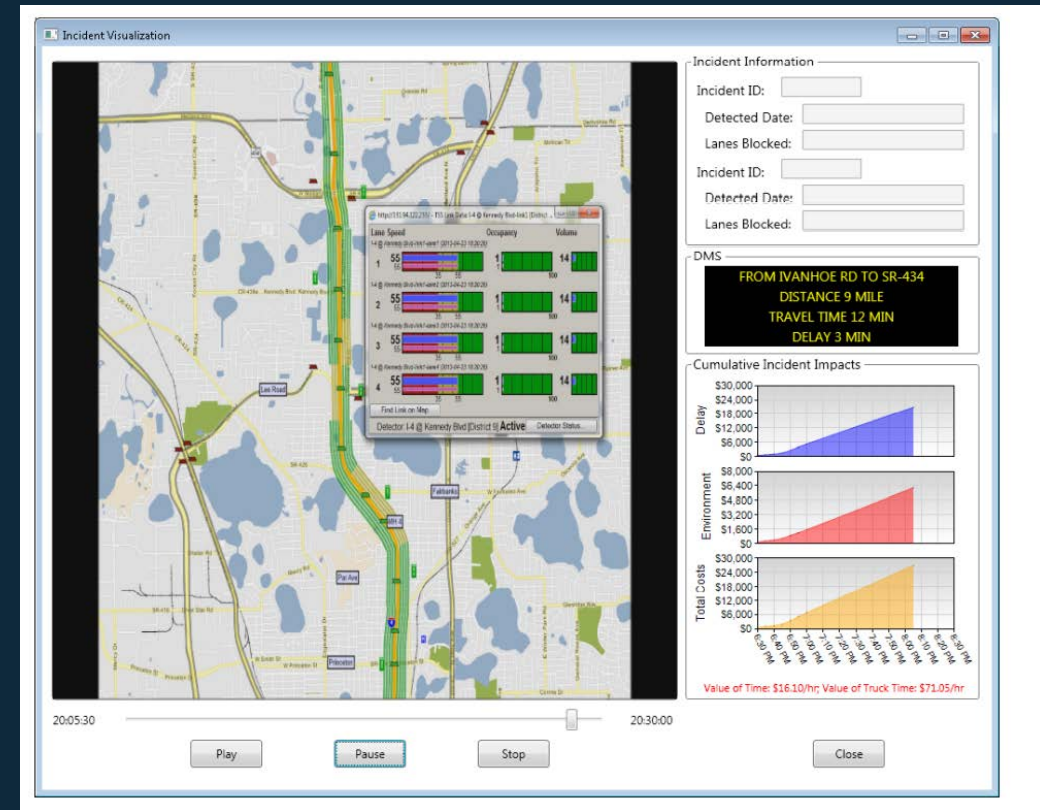

Examples from FIU Projects

I

Testing of TMC Software and Training of Operators

2010-2011 FDOT Project.

- Interface virtual sensors from simulation with the FDOT SunGuideSM software.
- Allow operator training and software update diagnostic.

II

Freeway Management Applications

- Real time activation ramp metering and variable speed limits based on probability of breakdown
- Assessing truck acceleration requirements on metered ramps
- Activation of signal plans to prevent queueing from the metered ramps
- Assessing merge area safety impacts using surrogate safety measures

II

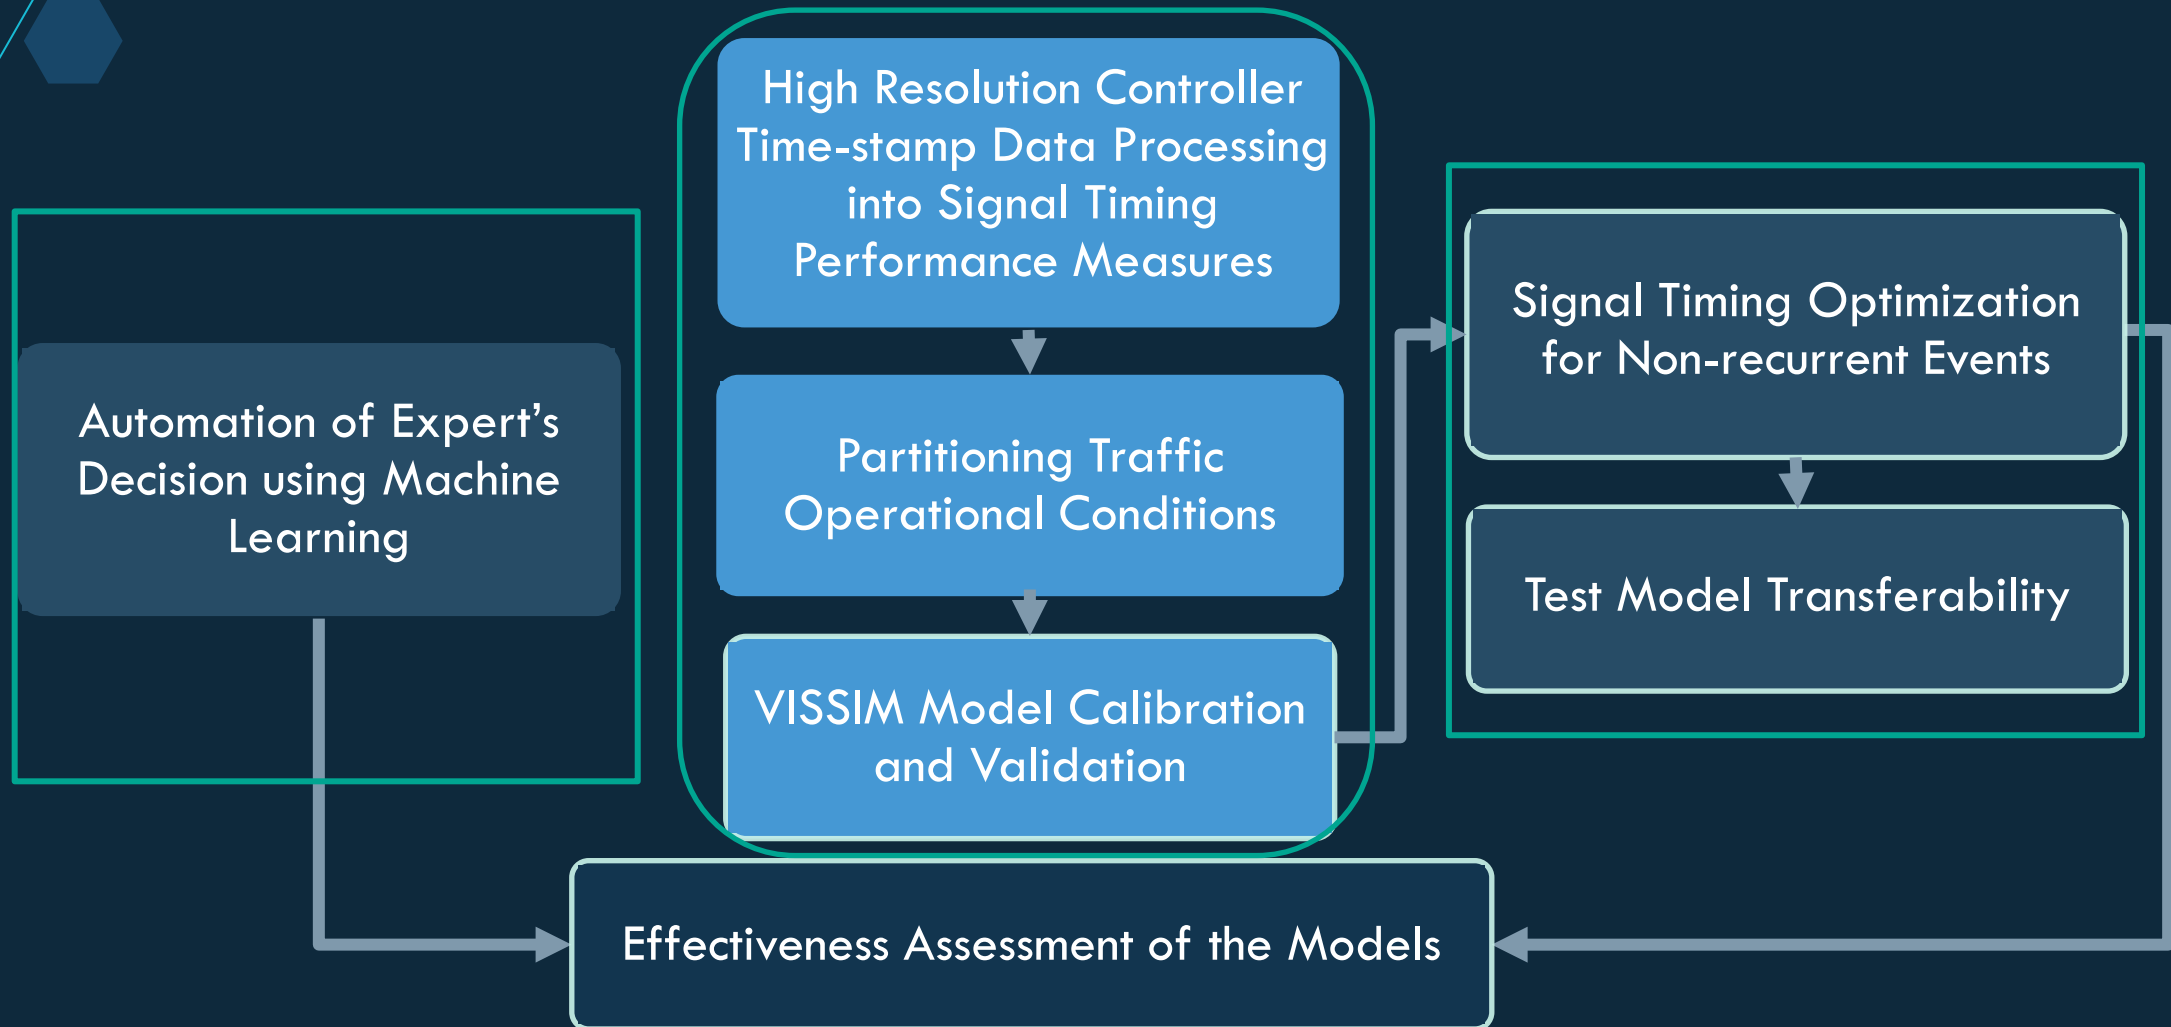

Example - Approaches to Address Truck Acceleration Issue

- Alt 1: Pushing the metering stop line back on the on-ramp
- Alt 2: Providing truck preemption on the on-ramp to turn the ramp metering signal to allow the truck to accelerate
- Alt 3: Dedicated a lane for truck by-pass at a distance that allows the truck to accelerate
 - 3A: Adding a new lane for this purpose
- Alt 4: Diverting the truck traffic to other ramps
- Alt 5: Not metering the ramps with acceleration lane constraints

III

Signal Timing Plan during Arterial Events

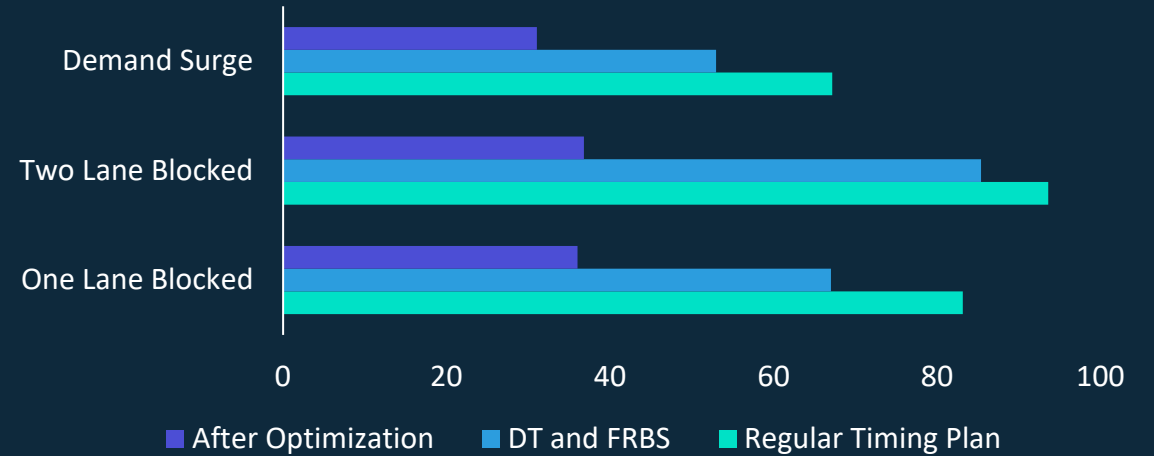

IV

Performance Assessment of the Developed Models

Corridor Travel Time (sec.)

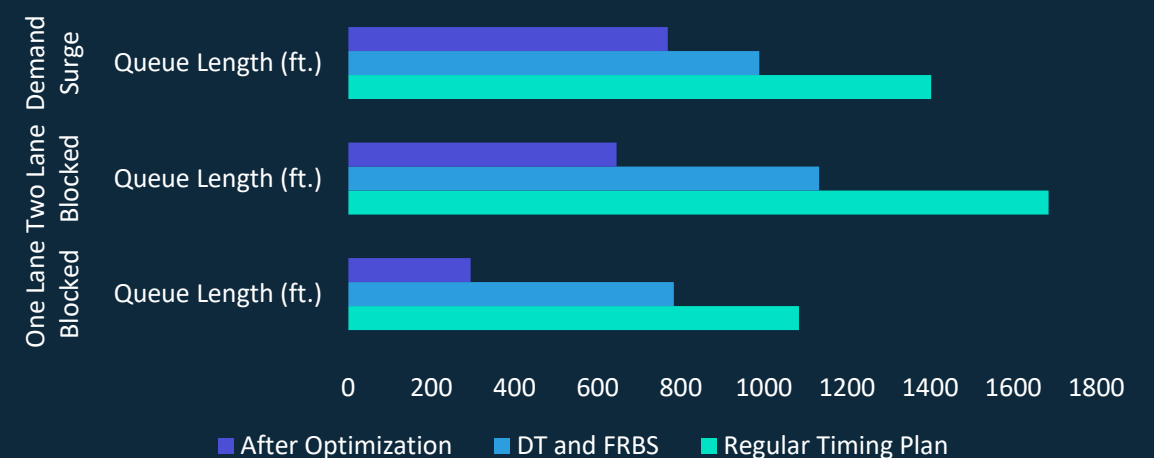

Intersection Delay (sec./veh)

Throughput

Queue Length (ft)

Heavy Vehicle Acceleration Characteristics

Speed	HGV1	HGV2	HGV3	HGV4	HGV5
0	3.4	3.4	3.7	3.4	3.4
10	3.3	3.3	3.3	3	3
20	2.8	2.8	2.8	2.5	2.5
30	2.7	2.7	2.7	2.4	2.4
40	2.5	2.5	2.5	2.3	2.3
50	2.4	2.4	2.4	2.2	2.2
60	2.3	2.3	2.3	1.5	1.5
70	1.9	1.9	2	1	1.2
80	1.5	1.5	1.5	0.8	0.8
90	1	1	1	0.5	0.5
100	0.6	0.6	0.6	0.3	0.3
110	0.2	0.2	0.3	0	0
120	0	0	0	0	0

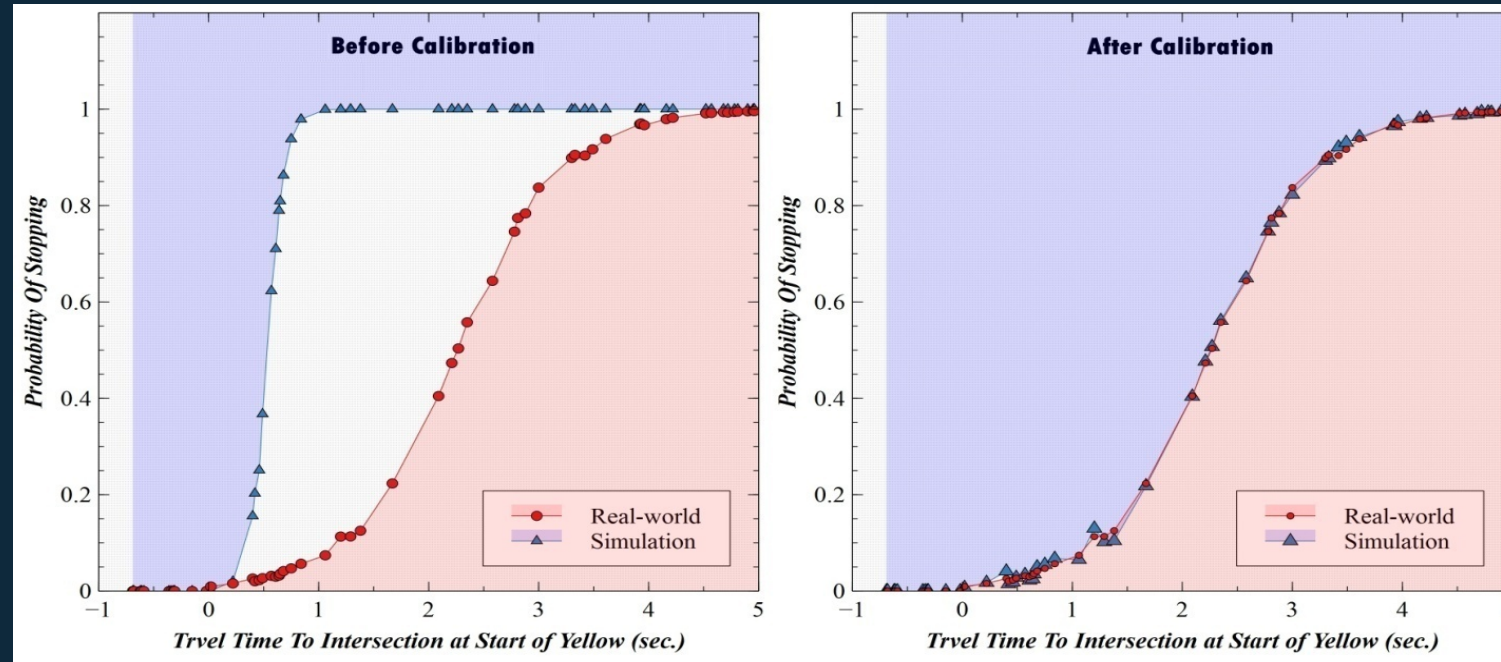

VIII

Prediction of Managed Lane Demand Shift

Goodness-of-Fit Statistics		Fixed Pricing and Static Assignment (ELTOD)	Dynamic pricing with Dynamic Assignment (Avenue)
New Toll Policy	RMSE (veh/ln/15min)	51.42	25.15
	MAPE (%)	12.22	5.87
Old Toll policy	RMSE (veh/ln/15min)	67.39	31.04
	MAPE (%)	13.48	5.90
